

# **Internet Banking Application using Java**

## **ABSTRACT :**

The bank management system is a software application developed using the C programming language to efficiently manage the operations of a bank. This system allows bank employees to perform various tasks such as creating and managing customer accounts, processing transactions, generating reports, and monitoring account activities. The system is designed to be user-friendly, secure, and reliable, providing a seamless and efficient banking experience for both customers and employees. Through the implementation of various features and functionalities, the bank management system aims to streamline banking operations, improve customer service, and enhance overall efficiency and productivity within the bank.

**Description:** Bank Management System project is designed to improve the overall efficiency and accuracy of banking operations, reduce manual errors, and enhance customer service. It is user-friendly and easy to navigate, making it a valuable tool for bank.

**KEYWORDS:** BANK ACCOUNT CREATION, DEBITING THE MONEY, CREDITING THE MONEY, CHECKING THE ACCOUNT BALANCE, LOG INTO THE ACCOUNT.
